

## INTRODUCTION

This Document lists a range of products that have passed Standards testing in the Novitatech Test Laboratory (formerly “Rehabilitation Engineering Equipment Testing Laboratory”). This document is intended as a summarising document only – the detailed test report is the official NATA endorsed document and should be considered to take precedence.

Only equipment that has been mechanically tested to a complete Standard, and can hence claim **FULL COMPLIANCE** (**except tests that our laboratory cannot perform: corrosion, rain effect, climatic storage, materials and finishes and selected battery charger compliance tests**), are automatically listed after successful completion of testing providing that customers have agreed to include their products on the list.

However, as per NATA requirements, we need a written request to include your product into the list if:

- Your products were successfully tested only to parts or specific test methods of a Standard (partial testing);
- Your products passed successfully only some parts or specific tests of a Standard (partial compliance).

*Please note:*

The results achieved when products are tested in their standard factory settings may not apply at the extremes of adjustment. The relevant Standard for each product is listed and *colour codes used*:

Compliance State	Colour	Description / Meaning
Full compliance	White	The product was tested and demonstrated compliance with all requirements of the specified standard within the scope of the laboratory’s accreditation.
Full testing with partial compliance	Blue	The product was tested for a complete standard but demonstrated compliance with selected clauses or parts of the standard only
Full Compliance at the time of testing	Gold	This standard has been withdrawn and not replaced

All enquiries about Standards (ISO, AS/NZS, BS, IEC), testing, and accreditation should be directed to:
